

ICPerMed Working Group 1

Clinical Studies in Personalised Medicine

Our Focus

Support Personalised Medicine (PM) related clinical research and trials to foster their successful uptake by the healthcare systems

Our Aims

Identify and communicate Best Practise Examples
Develop recommendations together with other initiatives and projects
Forster the establishment of transnational communication and collaboration

Communication & Exchange with other projects, initiatives and consortia
Organise event with researchers and stakeholders
Set up, perform and analyse a survey on PM with researchers etc.

Support ICPerMed in optimising funding and conducting of PM related clinical research
Recommendations for setting relevant frameworks in Europe and beyond for clinical research in PM

Our Activities

Mapping and investigation of the field of PM related clinical research and trials

Analysis of opportunities and hurdles for clinical development and approval of PM approaches

Contribution to the development of a registry for Best Practice Examples

Development and sharing of already existing registries, cohorts, strategic documents as well as recommendations supporting a better framework (national and regional) to conduct better PM related clinical research and trials and to support the future EP PerMed

Organisation of and support for ICPerMed & Family events
